**Libertyville, IL (August 1, 2008)** TouchPointCare, a leading provider of telehealth Phone Monitoring systems for the home care industry, announced today the completion of a successful 6 month pilot with Visiting Angels in Saint Louis Park, Minnesota. Based on the success of the pilot, Visiting Angels will continue to implement the TouchPointCare system to manage all caregiver documentation.

Visiting Angels' experienced, caring and compassionate caregivers help with a variety of non-medical services designed to allow seniors to continue to live in the comfort and familiar surroundings of their own home, rather than move to a facility.

According to Ron Hagberg, Visiting Angels' owner, the TouchPointCare system was chosen because of the system's ability to simplify and enhance caregiver documentation, but also because it offers significant marketing value for increasing referrals.

TouchPointCare is leading the telehealth revolution with a unique phone monitoring system that enables a "data driven" approach to home care. Their low cost, data collection system is based upon caregivers calling into an interactive voice recognition system via a dedicated toll free number to capture client data. The Internet based system is extremely flexible and highly customizable for a wide range of phone monitoring and data collection uses. Accessible via any standard web browser and offered as a monthly subscription service, TouchPointCare is making telehealth available for everyone. For more information visit their website at: [www.touchpointcare.com](http://www.touchpointcare.com)
